# TECHNICALS

### MARKET OUTLOOK

NIFTY (8517) CNX Nifty opened positive but failed to hold the higher levels and no major surprise from RBI's policy dragged the index towards the intraday low of 8448 levels. However, buying interest at lower levels supported the index to recoup the losses partially as it regained its 8500 levels in the last hour of trade. Finally, the volatile day ended with the loss of around 26 points. Now it has to hold above 8500 zones to witness buying interest towards 8550 and 8565 levels. While holding below 8480 may attract for a profit decline towards 8440 zones. Traders are required to remain cautious ahead of 1st quarterly result, Manufacturing PMI and Service PMI.

SENSEX (28072) BSE Sensex opened positive but fell down towards 27866 levels post RBI's declaration of keeping key rate unchanged. Although, it regained its psychological 28000 levels in the last hour of the day trade but still the session ended with the loss of around 115 points. Now, the index needs to cross and hold above 28150 levels for the bulls to take the index towards 28300 and 28500 levels. However if it fails to hold its psychological 28000 then bears may drag the index towards 27800 and 27500 levels.

# **HOW TO TRADE USING THE TRENDER+**

### **CLOSING PRICES**

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

### TDEND

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong', denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

### IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

## IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

TRENDER +: This is a broad based technical trend of the stock prevailant, may or may not be necessarily for the day.

DAILY PROJECTED RANGE: Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI
