COMMENTS

Nifty closed in the positive territory in last trading and it achieved our short term target of 9990 which is 61.8% retracement of the fall from 10180 to 9687 levels. The momentum indicators have been into sell mode still which is a short term worry for the bulls however the indicators are showing signs of reversal on the daily charts. If the Index has completed the expanded flat pattern then a probability of a new high is quite high, hence on the lower side 9850 is a very crucial support. On the upside, 10020 is a crucial resistance in the short term which when taken off will lead to further up move till 10100 levels and thereafter new highs i.e. till 10200 levels.

ANANDRATHI

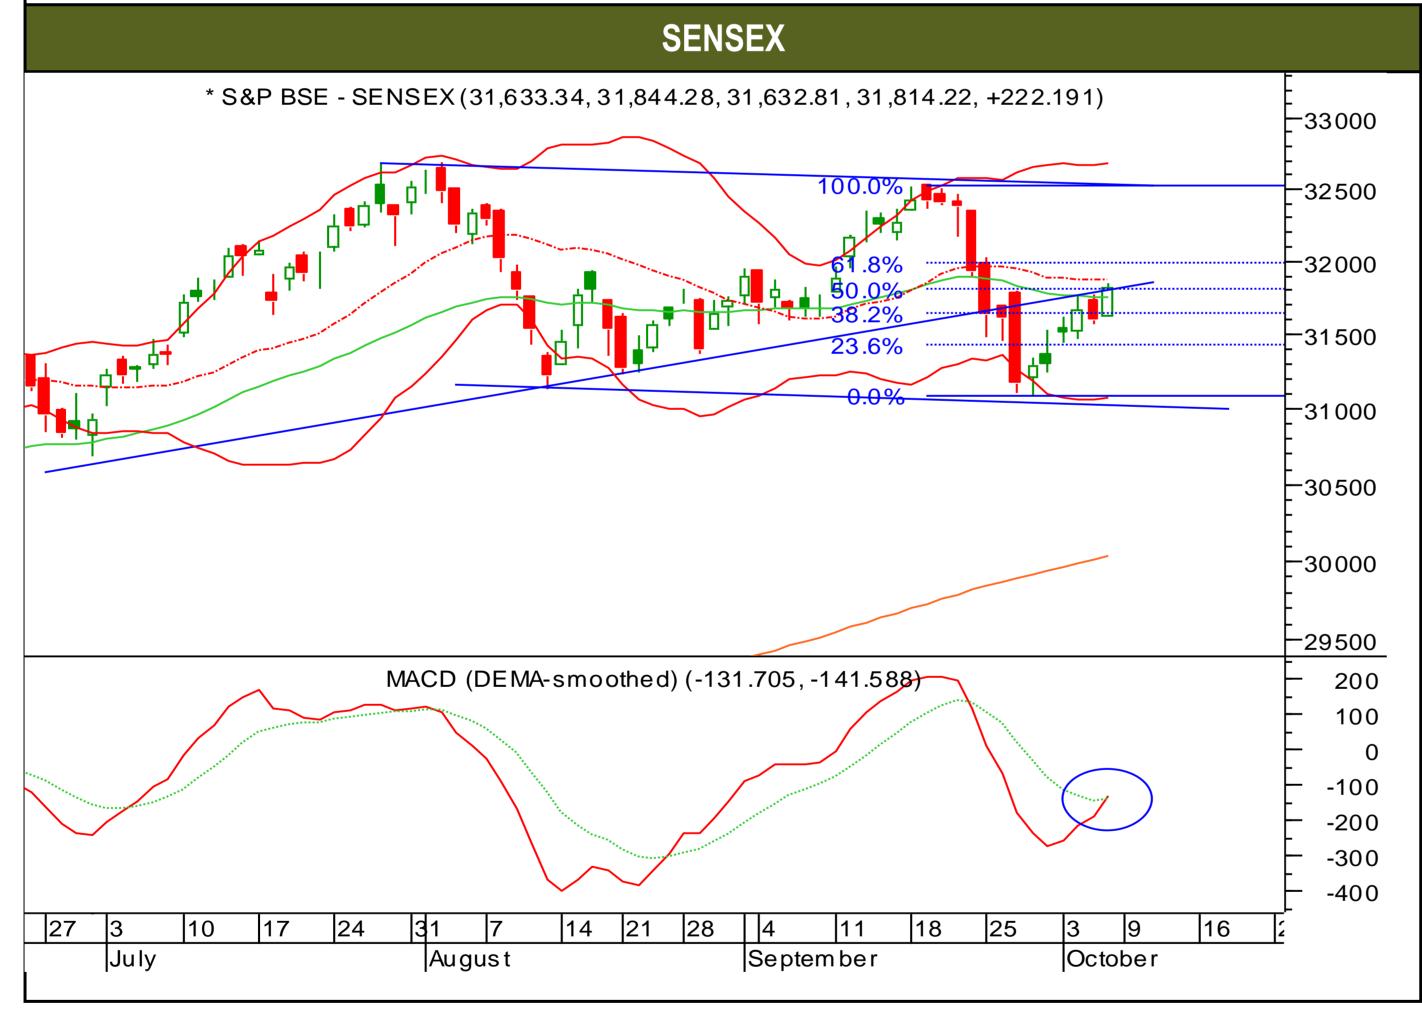

FIRST MORNING TECHNICAL CALL

Tuesday, October 10, 2017

COMMENTS

TECHNICALS

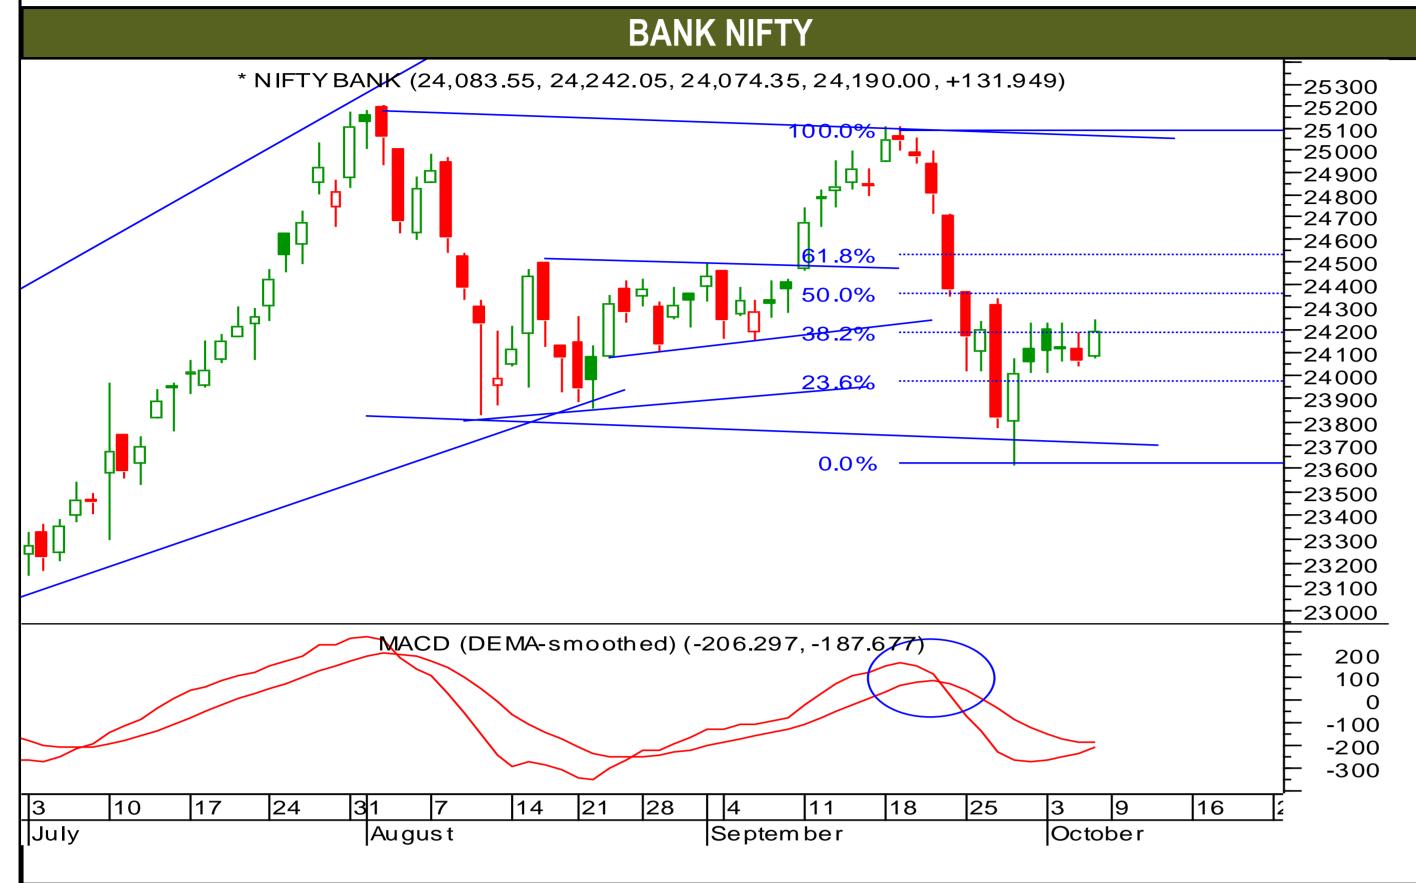

Sensex too closed in the positive territory and the momentum on the hourly charts have come into buy mode which is quite an important sign in the short term as this can lead to a short covering or a bounce back and it happened so as anticipated and we did see a bounce coming. There is a high probability that the Index has completed an expanding flat pattern on the daily as well as weekly charts. It has also reached to the lower Bollinger bands which is a very important support, hence 31500 and 31000 are very crucial support whereas 31970 is an important resistance and till those levels are not taken off the overall bias should be of caution now as we have seen a decent bounce till now. If an expanding flat pattern is over then a new high can't be ruled out.

Tuesday, October 10, 2017

TECHNICALS

COMMENTS

The Nifty bank closed in positive territory in last trading session and it achieved our short term target of 24200 levels i.e. 38.2% retracement of the fall from 25103 to 23611 levels. The momentum indicators are still in sell mode, hence till those don't come into buy mode this bounce shouldn't be used as an aggressive buying opportunity. Till there isn't any impulse on the hourly charts the recent bounce should be treated as a bounce in wave X up post which we shall see one more leg on the way down in its wave Z. However, there is also a possibility of an inverse head and shoulders formation on the hourly charts; hence if the Index sees a breakout above 24245 levels then it will zoom towards 24541 levels. The crucial levels to watch out for in the short term are 24000 which is the next swing support.

HOW TO TRADE USING THE TRENDER+

CLOSING PRICES

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

TREND

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong',denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

TRENDER + : This is a broad based technical trend of the stock prevailant, may or may not be necessarily for the day.

DAILY PROJECTED RANGE: Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI
