TECHNICALS

Nifty closed in the positive in last trading session, the Index has taken off the swing high of the hanging man candlestick pattern which is a bullish sign in the short term. The momentum indicators were and are still in buy mode which is quite supportive for the bulls. On the lower side, 10600 has now become the base whereas 10800 now looks quite achievable. The Index has been rising in an upward sloping parallel channel and till the channel is held the bulls need not worry. For all those who have been holding longs with our buy recommendation we advise them to trail the stop loss of 10550 for our target of 10800.

Sensex too closed in the positive territory in last trading session and the daily momentum indicator is still in the buy mode which is a positive sign for the bulls in the short term. Now, the Index is expected to take off its swing and once it happens today it will zoom towards our short term target of 35000 levels. Now, on the lower side, 34300 is an immediate support and below that 34000 levels and till those lows aren't broken the bulls need not worry.

Friday, January 12, 2018

TECHNICALS

COMMENTS

The Nifty bank closed in positive territory in last trading however it was unable to surpass the swing high of 25800 levels which if it does in today's trading session it will zoom towards 26000 immediately. So, we recommend buying Banknifty above 25800 for the target of 26000 with a stop loss of 25700 levels. The momentum indicators are quite supportive for the bulls. Hence if the Index takes off 25800 levels then it will be a price momentum breakout. The Banknifty too has been moving higher in an upward soloing parallel channel and the upper end of the channel comes to 26700 which is also the flag pattern target. On the lower side, 25200 is quite an important support, hence till those levels are not broken the bulls need not worry and it seems that now the banking guys will join the party.

HOW TO TRADE USING THE TRENDER+

CLOSING PRICES

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

TREND

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong', denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

TRENDER + : This is a broad based technical trend of the stock prevailant, may or may not be necessarily for the day.

DAILY PROJECTED RANGE: Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI
