HOW TO TRADE USING THE TRENDER+

CLOSING PRICES

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

TREND

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong',denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

TRENDER +: This is a broad based technical trend of the stock prevailant, may or may not be necessarily for the day.

DAILY PROJECTED RANGE: Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI
