COMMENTS

Nifty closed in the positive in last trading session but the momentum indicator is still in the sell mode on the daily charts. The Index has taken a halt at the 61.8% retracement level of the entire fall from 10490 to 10094 levels which is quite an important level as now till these levels are not taken off and till it doesn't close above 61.8% retracement levels then this can be just a corrective bounce, hence the Index traders should be cautious a these levels till 10354 levels aren't taken off and closed above that. On the lower side, 10200 is now a very crucial support, so till those levels are held we can see a consolidation within a range of 10200- 10354 levels. If 10200 levels are broken then the bears will have an upper hand and below 10200 levels 10000 is quite likely. So, the short term traders should trade using the above range.

TECHNICALS

Nifty closed in the positive in last trading session but the momentum indicator is still in the sell mode on the daily charts. The Index has taken a halt at the 61.8% retracement level of the entire fall from 10490 to 10094 levels which is quite an important level as now till these levels are not taken off and till it doesn't close above 61.8% retracement levels then this can be just a corrective bounce, hence the Index traders should be cautious a these levels till 10354 levels aren't taken off and closed above that. On the lower side, 10200 is now a very crucial support, so till those levels are held we can see a consolidation within a range of 10200- 10354 levels. If 10200 levels are broken then the bears will have an upper hand and below 10200 levels 10000 is quite likely. So, the short term traders should trade using the above range.

Thursday, November 23, 2017

TECHNICALS

The Nifty bank closed in positive territory in last trading session but still the momentum indicators are in sell mode which is still a concern for the bulls. The Index is trading above the bullish flag pattern which we have been saying since couple of weeks now. We had mentioned that the Index was trading within a range of 25050 to 25700 and the range was likely to break on the upside. It has happened as anticipated. Now, on the lower side, 25500 is an immediate support and till those levels aren't broken 26700 which is our medium term target is quite likely. The Index has a short term resistance at 26000 levels wherein we have also seen highest call options OI, hence the short term traders can buy above 26000 levels only for the immediate target of 26200 and thereafter 26500 levels and till these levels aren't taken off or broken we can see some consolidation within a range of 25500-26000 levels.

HOW TO TRADE USING THE TRENDER+

CLOSING PRICES

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

TREND

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong',denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

TRENDER + : This is a broad based technical trend of the stock prevailant, may or may not be necessarily for the day.

DAILY PROJECTED RANGE: Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI
