# TECHNICALS

### MARKET OUTLOOK

NIFTY (7951) CNX Nifty opened positive and edged higher towards 8010 levels in the wee hours of the trade. However, it failed to hold its 8000 levels and fell towards 7930 levels. It was hovering near the 7950 levels in the second half of the day and ended the session with the marginal gain of 2 points. It has been making higher highs – higher lows from last three trading sessions and headed towards its 50 DMA. It is forming a head and shoulder pattern on daily chart which has bullish implication by its nature but requires to cross and hold above 8055-8080 zone to get the pattern breakout for an upside potential target towards 8181 and higher levels. While if it fails to hold 8000 zones and slips below 7920 then momentum may fizzle out and selling pressure may get intensified towards 7850 then 7777 levels.

#### COMMENTS

SENSEX (26221) BSE Sensex opened with a gap up of around 190 points but failed to hold the opening gains and shed its lion portion of by falling towards 26168 levels. However, it has been making higher highs –higher lows from last three trading sessions and heading towards its 50 DMA. Finally the day ended with the gains of around 66 points. Hereafter, if the index manages to hold to the 26150 levels then buying interest may be seen towards 26350-26500 levels. On the downside if the fails to sustain 26000 then selling pressure may propel the index towards 25800 and 25650 levels.

# **HOW TO TRADE USING THE TRENDER+**

#### **CLOSING PRICES**

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

#### **TREND**

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong', denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

#### IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

### IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

TRENDER +: This is a broad based technical trend of the stock prevailant, may or may not be necessarily for the day.

DAILY PROJECTED RANGE: Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI

Disclaimer. Thisreport has been issued by A Anand Rathi Share and Stock Brokers Limited (AKSSEL), which is regulated by SEBI. The informationherein was obtained from various sources, we do not guarantee its accuracy or completeness. Neither the information in wind in the interval of th
