

### TECHNICALS

#### MARKET OUTLOOK

**NIFTY (8177)** CNX Nifty opened slightly negative and fell towards 8132 levels in the first half of the day as the bears tried to push the index in the negative zone. However, the bulls overpowered the bears as the index held onto its 8120 levels and finally closed positive for the sixth consecutive session with the gains of 25 points. It continued making higher highs- higher lows of last five trading sessions on the daily chart. It gave the highest daily close of last 29 trading sessions. Now, it has to hold above its 8150 levels to continue the positive momentum till 8250-8280 zones. If index fails to hold above 8120 zones then momentum may fizzle out and market may tumble down towards next support of 8050 zones.

**CNX NIFTY**

**COMMENTS**

**SENSEX (27036)** BSE Sensex opened negative but continued its positive momentum for six consecutive session. However it edged higher and regained the positive move in the later part of the day as it managed to close above 27000 marks with the gains of around 100 points. It continued with the positive price pattern of higher highs- higher lows and till it manages to hold its 26900 levels then buying interest may continue towards 27250 then 27500 levels. On the downside if it fails to sustain 26750 levels then profit booking may drag the index towards 26500 levels.

**S&P BSE-SENSEX**

**PIVOT TABLE**

	NIFTY	SENSEX	BANK NIFTY	CNX IT
<b>HIGH</b>	8189	27082	17675	11905

### TECHNICAL CALLS

#### PETRONET: Rs. 185

**EXECUTION PRICE RANGE**  
Buy Between Rs.181 To Rs.183

**STOP LOSS**  
178.00

**TARGET**  
190.00

**PETRONET** has given a strong breakout from its consolidation phase of last six weeks. It crossed and closed above its immediate hurdle of 183 levels. It gave the highest daily close of last thirty one trading sessions above its 50 DMA. It has taken multiple supports at its 170-171 levels and turning from the lower levels thus looks attractive in terms of risk reward ratio. So recommending buying the stock with the stop loss of 178 for the upside target of 190 levels.

#### BANKINDIA: Rs. 146

**EXECUTION PRICE RANGE**  
Buy Between Rs.142 To Rs.144

**STOP LOSS**  
140.00

**TARGET**  
150.00

**BANKINDIA** has formed inverted head & shoulders which has bullish implication by its nature but requires to cross and hold above 145-146 zones to get the pattern breakout for an upside potential target towards 155 and higher levels. It headed towards its 50 DMA and negated its negative pattern. So recommending buying the stock with the stop loss of 140 for the upside immediate target of 150 levels.

Thursday, October 08, 2015

## HOW TO TRADE USING THE TRENDER+

## CLOSING PRICES

Closing price is the price at which scrip closes on the date mentioned in the report. Traders may initiate their intraday trade on this level. The stock or index should sustain above or below the pivot else you should exit the trade.

## TREND

Trend is the level at which the tendency of stocks can be identified. For best results, you can use the 'trender' to trade. A 'weak' trend denoted by "DOWN" means that traders can trade with a negative bias. If the trend is 'strong', denoted by "UP", one can trade with a positive bias on the long side. Base price should be the pivot point price.

## IF THE TREND IS UP

Ideally, for a buy position, buy at the pivot point and use S1 as the stop loss for a target of levels around R2 and higher.

## IF THE TREND IS DOWN

Ideally, for a sell position, sell at the pivot point and use R1 as a stop loss and S2 or lower levels as a target level.

**TRENDER +** : This is a broad based technical trend of the stock prevalent, may or may not be necessarily for the day.

**DAILY PROJECTED RANGE** : Projected Daily high and low are indicative range for the day, if the price moves out of the range the trend in that side may accelerate and turn bullish or bearish.

THE TREND AND THE DAILY PROJECTED RANGE IS BASED ON CERTAIN SIMPLE CALCULATIONS WHICH IS PROVIDED BY BLOOMBERG, EXCLUSIVELY USED BY ANAND RATHI
