### Editorial

## Defending 11,000-mark is crucial for Nifty!

The last one and a half week has certainly been hectic for D-Street, in which the headline index saw wild swings. All the while, we have been seeing major setbacks, intraday reversal and additional sell-offs. If you are wondering what the cause of these extravagant moves is, then you must know that the rapid spread of the deadly Coronavirus/COVID-19, which has now sickened almost 90,000 individuals worldwide, has even claimed more than 3,000 lives. Health officials across the globe are finding it difficult to contain the virus. Further, India, which was so far immune has too been recently gripped by the virus.

Amidst feeling of doom and gloom, the service sector continued to usher in heydays as widely tracked IHS Markit India Services Business Activity Index rose from 55.5 in January to 57.5 in February. In PMI phraseology, the 50-mark threshold separates expansion from contraction. Further the high volatility, which had been a talk of the town, is caused due to the ebb and the flow of Coronavirus news, which seems to be cooling off from the higher levels, is indicating some stability for domestic markets.

On Wall Street, over the past week or so, volatility has recaptured authority. Massive moves in US markets have become a norm lately. One of the key catalysts which laid the red carpet for high volatility was the unscheduled announcement of US Fed, which lowered its target range for Fed funds rate by 50 basis points, was broadly anticipated but not until the regularly scheduled meeting in March.

Wild swings were seen post the announcement as the market participants feared that the emergency rate cut by US Fed also signals that US economy could be in a grave problem because of the virus outbreak. At the same time,

some investors were concerned that the only thing the rate cut can do, is to help lower down borrowing costs. However, the cost of the fund is not the cause of worry now, as the corporates are facing difficulties in obtaining raw materials and components in an attempt to curb production. Fed's rate cuts are not going to solve the supply chain issue. And, this fear was clearly reflected in US-treasury yield, which fell below one per cent for the first time ever.

Meanwhile, toning with US Fed action, IMF said that it would unleash an aid of \$50 billion to help combat Coronavirus. IMF would like to see funds used first to bolster health-care systems and then for targeted fiscal stimulus programs and help liquidity, Director Kristalina Georgieva said.

The pattern analysis show that Nifty trades below all its key moving averages but at the same time, Nifty is finding its feet near and respecting the double bottom pattern support that exists in the zone of 11,020-11,100. Also, supportive efforts have been emerging at 78 per cent retracement of the entire up move of September low to all-time high level. At present, the index appears to be in consolidation of a broad range of 11,036 to 11,433 and going ahead, any break above or below this range, would give a clear direction to the index. Currently, the chemicals and pharmaceuticals stocks are in demand and likely to be on traders and investors' radar. It is essential to note that Nifty is still not entirely out of the woods yet as it has all the risks of facing a selling pressure again at higher levels. It would be wise not to get all excited in a short-covering led move and start calling a bottom and buying aggressively. Yes, some initial evidence is there on the charts of an important support but buy slow and staggered. The confirmation of strength would only be after Nifty closes above 11,433 levels along with the broad participation of stocks.

### Street Talk: PIDILITE INDUSTRIES LTD

BUY

CMP  
₹1629.35

High risk taking investors can take exposure in Pidilite Industries Ltd (BSE Code 500331). The stock is likely to keep its upward momentum alive in the short term.

# FUNDAMENTAL RECOMMENDATION

## HONEYWELL AUTOMATION INDIA LTD

Ticker : 517174 BUY: ₹34,106.25 Target: ₹38,000

52-Week H/L: ₹39,499.50 / 21,415.00 FV: ₹10 Equity: ₹8.84Cr.

Honeywell Automation India Limited is engaged in the manufacturing of electronic systems and components, repair and maintenance and also of trading of machinery, equipments and supplies. On the standalone quarterly financial front, the net sales increased by 11.01 per cent to Rs 901.20 crore in Q3FY20, from Rs 811.79 crore in Q3FY19. PBDT for Q3FY20 stood at Rs 205.94 crore, a growth of 51.54 per cent as compared to Rs 135.90 crore in Q3FY19. In Q3FY20, the net profit rose by 69.05 per cent to Rs 144.74 crore as compared to Rs 85.62 crore

### LAST FIVE QUARTERS (₹/Cr) Standalone

	Dec-19	Sep-19	Jun-19	Mar-19	Dec-18
Total Income	901.20	827.52	857.03	810.27	811.79
Other Income	19.18	26.13	18.62	14.98	17.72
Operating Profit	207.77	176.65	187.31	139.47	135.90
Interest	1.83	1.36	2.16	3.48	0.00
Net Profit	144.74	120.21	114.10	84.12	85.62
Equity	8.84	8.84	8.84	8.84	8.84

in Q3FY19. Considering the company's strong financial performance for the quarter, a positive growth trend is likely to be seen. Hence, we recommend a **BUY**.

## REVIEW

### HINDALCO

Ticker : 500440 FV: ₹1 52-Week H/L: ₹221.2/146.85

Rec. Price ₹214.70 CMP: ₹155.55 Percentage: 27.55 ↓

We had recommended Hindalco Industries in volume no. 36, issue no. 10 (dated December 30, 2019), when the scrip was trading at Rs 214.70. The company is engaged in the production of aluminium and copper products. The stock was previously recommended due to a planned expansion of its Utkal Alumina Refinery leading to a strong growth outlook for Hindalco. In Q3FY20 on consolidated basis, the company's revenue decreased by 12.09 per cent to Rs 29,197 crore from Rs 33,213 crore in Q3FY19. PBDT for Q3FY20 stood at Rs 2,766 crore, down by 12.25 per cent as compared to Rs 3,152 crore for Q3FY19. In Q3FY20, the net profit dropped by 23.91 per cent to Rs 1,060 crore

### LAST FIVE QUARTERS (₹/Cr) Consolidated

	Dec-19	Sep-19	Jun-19	Mar-19	Dec-18
Total Income	29197.00	29657.00	29972.13	33745.62	33213.00
Other Income	297.00	287.00	296.07	510.25	270.00
Operating Profit	3661.00	3918.00	3766.01	3949.77	4081.00
Interest	889.00	922.00	956.44	975.45	929.00
Net Profit	1060.00	973.00	1061.72	1179.19	1393.00
Equity	222.00	222.00	222.42	222.39	223.00

as against Rs 1,393 crore in Q3FY19. An improvement in the industry will generate growth and Hindalco will also be able to benefit from the strategic expansions undertaken as part of Hindalco-Novelis. Hence, we recommend a **HOLD**.

# TECHNICAL RECOMMENDATION

## STOCK STRATEGY

DABUR INDIA ..... BUY ..... CMP ₹517.90

BSE Code ..... 500096

Target 1 .... ₹550

Target 2 .... ₹565

Stoploss.... ₹488

- ✓ **Current Observation:** Dabur is trading strong in a weak market condition. After a five-week base formation, it reached to a new lifetime high. The stock is trading in higher highs and higher lows fashion since May 2018 but it has never formed a lower low on a weekly basis over a decade.
- ✓ As the price is trading above the prior pivot, all the moving averages are trending up. The 50-DMA is working as a support several times. The 14 period RSI is also moving in an up trending fashion by forming higher highs and higher lows and it is in a super bullish zone.
- ✓ The MACD is also above the zero line and signal line. The histogram also suggests that the bullish momentum is picking up. The directional index ADX is also at a decent level of 24.44 on a weekly chart. The +DI is above the -DI and is indicating that the bullish strength is more in the stock.
- ✓ The stock is also meeting all the CANSLIM criteria. Its price relative strength is at 86 and EPS is at 75. The good buyer's demand shows an institutional interest in the stock. The Return on Equity (ROE) is as high as 32 per cent. Consistent sales and EPS growth makes the stock fundamentally attractive.
- ✓ Buy this stock at Rs 517.90 with a stop-loss of Rs 488. The short-term target is placed at Rs 550-Rs 565.

## REVIEW OF STOCK STRATEGY

We had recommended for buying the stock of Titan Company Ltd at Rs 1,279.05 in issue no. 19 (dated March 2, 2020). Post our recommendation, the stock did not sustain at higher levels and on intraday basis, it slipped below the stop-loss level but on closing basis, it has managed to close above the stop-loss

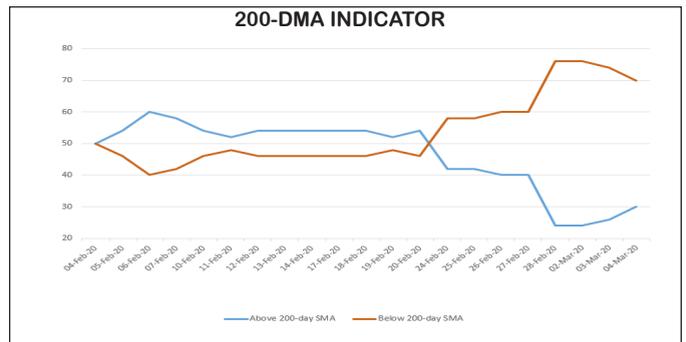

level. Currently, the stock is hovering around 50-day EMA. However, we can expect to see smart up moves if it closes above Rs 1,270-level. We would advise our readers to hold this stock with a stop-loss of Rs 1,235 on closing basis, as the stock is likely to move higher from the current levels.

# SENTIMENT INDICATORS

## 200-DMA Indicator :

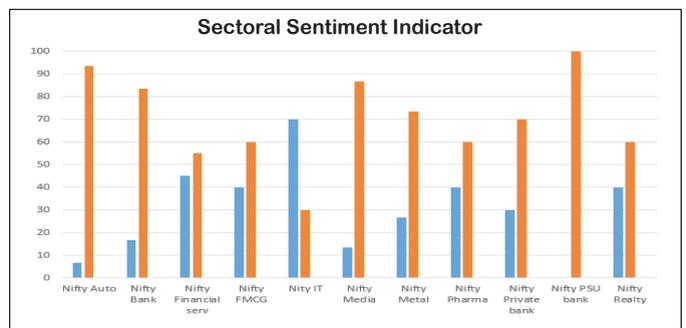

This indicator measures the percentage of Nifty 50 stocks that are trading above/below their 200-day simple moving averages. The 200-DMA is considered important as it is one of the basic technical indicators that can be used to determine the long-term trend of a security. Almost 30 per cent of the stocks that constitute Nifty 50-the equity benchmark index, are trading above their 200-DMAs while, 70 per cent of the stocks are trading below their 200-DMAs. In the last five trading sessions, BPCL, HDFC, JSW Steel, Reliance, SBIN and ULTRACEMCO have closed below their 200-DMA, while on the flip side, POWERGRID has managed to close above 200-DMA. On a WoW comparison basis, we observed that 10 per cent of the stocks have managed to close below their 200-DMAs. For the first time since September 2019, Reliance Industries has managed to close below its 200-DMA and since October 2019, HDFC has managed to close below its 200-DMA. From the all-time high level to the low of March 02, 2020, Nifty index has witnessed almost 1,394.25 points or 11.21 per cent downward move and this downward move

was not only quantitative in nature but also qualitative as almost 42 per cent stocks have closed below their 200-DMAs since January 17, 2020. With this, the current ratio of stocks, trading above/below its 200-DMA, stands at 30:70, which is the lowest since September 20, 2019. Going ahead, considering that the majority of the stocks and index itself are trading below its 200-DMA, the traders should adopt a sell on rise strategy in the market citing the ongoing weakness.

## Sectoral Sentiment Indicator :

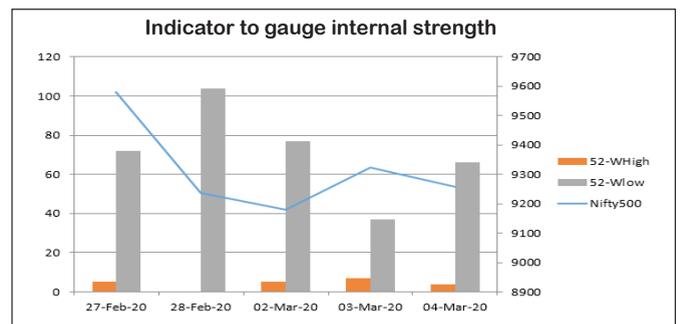

This indicator basically interprets the number of stocks in the sectoral indices trading above/below their 200-day moving averages. This will help us to know which of the sectors are improving their performance. On a WoW comparison basis, the sectoral index Nifty Financial Services and Nifty Media has seen a substantial decline as 20 per cent each of the stocks have managed to close below their 200-DMAs, followed by Nifty Auto and Nifty FMCG by 13.34 per cent each. Among Nifty Realty, about 10 per cent of the stock constituents had moved below their 200-DMA as well as Nifty Bank and Nifty PSU Bank, where 8.33 per cent each component moved below the crucial 200-DMA. Nifty Metal index saw a minor dip in the stock, as stock trading above its 200-DMA fell to 26.66 per cent from 33.33 per cent last week. Nifty IT, Nifty Pharma and Nifty Private Bank remains unchanged on WoW comparison. Nifty Auto is consistently witnessing new addition in stocks, which are trading below their 200-DMAs since the last five weeks. In Nifty Auto Index, on a cumulative basis, almost 66.67 per cent constituents have managed to close below their 200-DMAs in the last five weeks. Among the constituents of Nifty Financial

Services index, almost 55 per cent of the stocks were trading below their 200-DMA while last week, the stocks were trading above its 200-DMA by an average of 2.93 per cent but in the current week, we have seen a correction in the stocks by an average of 6.87 per cent. With this, in the current week, the index itself has managed to close below its 200-DMA. The current structure of Nifty Pharma looks interesting as among the constituents of index, almost 60 per cent stocks are trading below their 200-DMAs, despite of that, on Wednesday, the index has managed to close above its 200-DMA.

## Indicator To Gauge Internal Strength :

This indicator helps us to gauge the internal strength of the market. Among Nifty 500 stocks, a higher number of stocks reaching 52-week highs and lesser stocks hitting 52-week lows represent a bull market. The opposite suggests a bear market. On a WoW comparison, the previous week's average ratio was 19:30 and in the current week, the average ratio is 4:71 where, on an average, four stocks touched new 52-week highs while, 71 stocks hit new 52-week lows. On October 09, 2019, Nifty 500 index has marked the low of 9,008.85 at a time when the ratio of stocks making new 52-week high/low stood at 4:40, where four stocks have touched new 52-week highs while, 40 stocks hit new 52-week lows. On Monday, the index has marked the low of 9,105 which is 96.15 points or 1.06 per cent above from the low of October 09, 2019 but the current ratio is 5:77, which clearly indicates that there is a broad participation in the downfall. Meanwhile, one interesting fact that comes into notice in the current week is the average number of stocks making 52-week low, which was highest since August

2019. With this, on Friday, almost 10 per cent of the stocks from Nifty 500 space marked new 52-week low, which is highest since August 26, 2019. This clearly suggests that the internal strength of markets continue to deteriorate and further deterioration in the ratio would raise the risk of a more meaningful correction.

# Technical

## WHAT LIES AHEAD : NEAR-TERM PICTURE

**SPOT NIFTY :** Nifty is consolidating after touching an important support of 11,000. The price action of the last three days is within the limits of Monday bar. On Thursday, even though it moved above the prior bar high, it did not sustain and closed near the day's low point. As weekly derivative settlement was on the cards, the volatility within the range was very high. Now, Monday's high of 11,433 has become an important resistance point. If there is any move above this level, then Nifty may attempt to fill the gap. On the upside, 11,433-11,536 will be a resistance zone. We cannot forecast behind this zone for now. It is difficult to move above the level as sentiments are at rock bottom. On an hourly chart, Nifty has broken out the bottom on Thursday morning but did not successfully close above 11,356. In a very short-term, this level will act as a resistance. In short, any close above the prior bar high, which is an indication of Nifty, is trying to fill the gap area. In any case, if Nifty closes below 11,244, which is Thursday's low, it will be an indication of the continuation of downtrend. However, a close below 11,000 level will have severe repercussions on the market. In current conditions, the indicators may sustain in oversold conditions for longer than expected period. Unless stronger positive divergences appears and confirms the breakout, it is better not to venture for a long position.

**NIFTY DERIVATIVES:** Nifty futures lost 386.45 points or 3.32 per cent since the last weekly expiry, except on Tuesday; otherwise, it closed in negative on all days. Currently, Nifty is consolidating after more than 400 points fall in just one day. The open interest increased on a flat closing day. Nifty futures have actually traded in a discount for the past one week. The open interest is increased by 7.36 per cent. The rollovers were seen at 9.4 per cent in the first week of March series. For the

next week, the Put-Call Ratio (PCR) is at 0.87 but, for March monthly series, the PCR is much higher, which is at 1.31. Even the 10,000 put open interest is also high on the monthly series and is indicating that the 'out of the money' betting is going on. For the next weekly expiry, the highest call open interest is at 11,400 strikes, followed by 11,500 strikes. On the put side, the highest put open interest is at 11,000 strikes. The total call open interest is at 87,42,375 and the total put open interest is at 76,18,425. From 11,000 to 11,500 strike calls and 11,050 to 11,450 puts, have the shorts built up. This means that next week, the volatility will increase as high as possible. The above normal implied volatility indicates forthcoming choppiness in the market. The money calls have an average of 20 IV and the puts have more than 25 IV. This high IV at some point of time will collapse to a mean level of 13.9. Generally, in this scenario, the option premiums will also collapse. Option writers will benefit out of this scenario. Besides, India VIX rose from 17.77 to 23.25. This is an indication that high volatility will prevail for some time and the risk-reward ratio will not be favourable for intraday traders. Apply the volatile strategies like strangles and straddles to win the market condition.

### THE 'CALM BEFORE THE STORM' INDICATOR (BOLLINGER BAND SQUEEZE)

Stock Symbol	Previous day volume	5-day avg volume	Prev Weeks High	Prev Weeks Low
AUBANK	1420792	934596	1201.00	1019.10

# Your Technical Portfolio Guide

**JUBILANT  
FOODWORKS**

**JUBILANT FOODWORKS LTD**

**CMP: ₹1709.90**

**BSE Code: 533155**

**Please suggest what should I do with JUBLFOOD I bought at Rs 1,560 for medium-term?**  
- Rakesh Kothawade

## **BOOK PROFIT IN JUBILANT FOODWORKS AT CURRENT MARKET PRICE**

Jubilant FoodWorks Ltd is currently trading at Rs 1,709.90. Its 52-week high/low stand at Rs 1,973.05/Rs 1,078.05 made on February 03, 2020 and August 23, 2019 respectively. The stock had formed a reversal spinning bottom like candlestick pattern as on weekend of August 23, 2019 and thereafter, marked the sequence of higher tops and higher bottoms. Recently, the stock had given a breakdown of upward sloping trendline support formed by connecting swing lows from October 2019, which suggests a correction before another northward rally. With this trendline breakdown, the stock has also managed to close below its weekly pivot and short-term moving averages, i.e. 20-day EMA and 50-day EMA. Among the momentum indicators, the 14-period daily RSI is currently quoting at 41.46 and it is trading below its nine-day average. Interestingly, the daily RSI has given a breakdown of head and shoulders pattern, which is also a bearish sign. Moreover, on the directional index, the bearish strength is higher than the bullish strength as +DI is below the -DI. Considering all the above factors, we recommend you to book profit in Jubilant FoodWorks Ltd at current market price.

**Dredging Corporation  
of India Limited**

**DREDGING CORPORATION OF INDIA LTD**

**CMP: ₹270.40**

**BSE Code: 52318**

**What are the prospects of Dredging Corporation? I have bought the shares at Rs 391 for a long-term. Please let me know.**  
- Sandip Gavali

## **EXIT DREDGING CORPORATION OF INDIA AT CURRENT MARKET PRICE**

Dredging Corporation of India Ltd is currently trading at Rs 270.40 Its 52-week high/low stand at Rs 456.70/Rs 265 made on March 06, 2019 and March 04, 2020 respectively. The stock had formed a reversal spinning top candlestick pattern as on weekend of January 05, 2018 and thereafter, marked the sequence of lower tops and lower bottoms. Considering the weekly time frame, the stock has recently given a breakdown of descending triangle pattern, which suggests a further downside momentum. Majorly, the stock is displaying a bearish trend as it is trading below its weekly pivot and short-term moving averages, that is, 20-week EMA, 50-week EMA, 100-week EMA and 200-Week EMA. The leading indicator, 14-period weekly RSI is currently quoting at 35.46 and it is not able to cross 60-mark since January 2018. The weekly and daily MACD stays bearish as it is trading below its zero line and signal line. Moreover, the weekly stochastic oscillator is also suggesting some bearish strength as per cent K is trading below per cent D. Considering all the above factors, we recommend you to exit in Dredging Corporation of India at current market price.

**TATA  
POWER**

**TATA POWER CO. LTD**

**CMP: ₹44.25**

**BSE Code: 500400**

**I am thinking of entering Tata Power for a long-term investment. Let me know what should I do?**  
- Dipesh Khatri

## **AVOID BUYING TATA POWER FOR NOW**

Tata Power Co. Ltd is currently trading at Rs 44.25 Its 52-week high/low stand at Rs 76.90/Rs 43.30 made on April 02, 2019 and March 02, 2020 respectively. The stock had formed a reversal spinning top candlestick pattern as on weekend of January 12, 2018 and thereafter, marked the sequence of lower tops and lower bottoms with rising volumes where the stock hit below its major support at Rs 50 level. Currently, the stock is trading below its 20-week EMA (55.25), 50-week EMA (60.30), 100-week EMA (65.80) and 200-week EMA (71.50), which indicates a medium and long-term downtrend. The leading indicator, 14-period weekly RSI is currently quoting at 31.55 and it is not able to cross 60-mark since January 2018. Considering the daily time frame, currently, the volumes support the falling prices and oscillators are inclined southward, which suggests more downside from the current levels. Hence, we recommend you to avoid buying Tata Power for now.

**JINDAL STEEL & POWER LTD**

**CMP: 154.30**

**BSE Code: 532286**

**I have bought JINDALSTEL at Rs 140 for the medium-term. Should I wait or exit with profits?**  
- Navin Sood

## **BOOK PROFIT IN JINDAL STEEL & POWER AT CURRENT MARKET PRICE**

Jindal Steel & Power Ltd is currently trading at Rs 154.30. Its 52-week high/low stand at Rs 202.40/Rs 91.10 made on February 11, 2020 and August 29, 2018 respectively. The stock had given a neckline breakout of Adam & Adam double top pattern as on November 01, 2019 and thereafter, marked the sequence of higher tops and higher bottoms. Considering the daily time frame, the stock has recently given the breakdown of upward sloping trendline support, which suggests a further downside momentum. Along with this trendline breakdown, the stock has also managed to close below its weekly pivot and short and long-term moving averages i.e. 20-day EMA, 50-day EMA, 100-day EMA and 200-day EMA. Among the momentum indicators, the 14-period weekly RSI has cooled off after touching the 70 zone and, at present, its reading is 49.20. The RSI is trading below its nine-week average and it is in falling mode, which indicates a further downside momentum. Considering all the above factors, we recommend you to book profit in Jindal Steel & Power at the current market price.
