Indian Equity Market Performance:

Indian Equity market gave up early gains to end modestly lower on Tuesday as caution prevailed ahead of the Federal Reserve's monetary policy announcement on Wednesday.

Overnight Federal Open Market Committee votes unanimously to leave benchmark rate unchanged in target range of 5.25%-5.5%, a two-decade high, for sixth straight meeting. Further stated that the FOMC doesn't expect to cut rates "until it has gained greater confidence that inflation is moving sustainably toward 2%"

Sectoral Front Performance:

On the sectoral front except realty, FMCG, metal, all other sectoral indices are trading in the green with power, Bank and Oil & Gas up 0.5-2 percent.

Technical Analysis:

On the technical front, Nifty formed bearish candlestick pattern on the daily charts. The index opened strong and rallied 140 points before turning lower in the last hour. Presently Nifty is still able to sustain above the crucial trend deciding level of 22,500 mark hence it seems that the short-term trend in the Index will continue to remain positive probably taking a breather after a reasonable rise from the lows. The larger degree bullish pattern of higher tops and bottoms is intact and the Nifty is now moving up towards the new higher top formation of the pattern. In terms of levels, the range of 22400-22450 is expected to provide crucial support for the index. A sustained movement below 22450 may extend the correction to the range of 22000-22100 in the short term. Conversely, the resistance has shifted to the range of 22700-22800. A sustained movement above 22800 would likely resume the upward trend towards the levels of 23000-23200.

Option Activity:

On the option front, maximum Put OI is at 22000 followed by 22500 strike, while maximum Call OI is at 23000 followed by 22800 strike. Call writing was seen at 22800 strike, followed by 23000 strike while Put writing was seen at 22700 strike, followed by 22000 strike.
